No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc., for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1978 articles are the same as those shown for current articles.

CONTENTS OF VOLUME 84

NUMBER 1, JANUARY, 1978

B. MALFOY AND J. A. REYNAUD. Alternating Current Polarographic Investigation of Polysaccharides in DNA 1

V. P. DEMUSHKIN AND YU, G. PLYASHKEVICH. Analysis of Nucleic Acid Bases by High-Performance Liquid Ton Chromatography 12

JOHN A. JACQUEZ, DAVID M. FOSTER, AND MICHAEL F. SHANAHAN. Analysis of Data from Experiments Using Double Labeling 19

ALBERT DIPASQUALE, JANOS M. VARGA, GISELA MOELLMANN, AND JOSEPH MCGUIRE. Synthesis of a Hormonally Active Conjugate of α-MSH, Ferritin, and Fluorescein 37

JAN S. TKACZ. A Rapid Semiquantitative Assay that Facilitates Purification of Endo-β-*N*Acetylglucosaminidase H from *Streptomyces plicatus* 49

P. A. CUYPERS, W. TH. HERMENS, AND H. C. HEMKER. Ellipsometry as a Tool to Study Protein Films at Liquid–Solid Interfaces 56

D. JOB, C. COCHET, A. DHIEN, AND E. M. CHAMBAZ. A Rapid Method for Screening Inhibitor Effects: Determination of I_{50} and Its Standard Deviation 68

R. SEGAL, I. MILO-GOLDZWEIG, D. V. ZAITSCHEK, AND M. NOAM. A Facile Method for Detection of the Genuine Sapogenin from a Saponin Extract 78

ALAN H. ULLMAN, JOSEPH W. HARDING, JR., AND HAROLD B. WHITE, III. Fatty Acid Synthetase Assay Employing Bicyclic Diones as Substrates 85

CARMELO BERNABEU, FRANCISCO P. CONDE, AND DAVID VAZQUEZ. Extraction of Pure Ribosomal Protein and Removal of Coomassie Blue from Acrylamide Gels 97

JAMES C. WALLWORK, CATHERINE T. LEE, AND JOHN A. DUERRE. A Sensitive Assay for Histone Methyltransferase 103

RHODA BLOSTEIN AND STEPHEN BENDEROFF. The Use of Radioiodinated Albumin to Measure Internal and External Vesicle Space 111

R. E. STEPHENS. Fluorescent Thin-Layer Peptide Mapping for Protein Identification and Comparison in the Subnanomole Range 116

H. KÖCHLI AND J. P. VON WARTBURG. A Sensitive Photometric Assay for Monoamine Oxidase 127

A. G. NETTING AND C. BARR. Design for an Accurate and Versatile Radio Gas Chromatograph 136

M. P. UITENDAAL, C. H. M. M. DE BRUYN, T. L. OEI, P. HÖSLI, AND C. GRISCELLI. A New Ultramicrochemical Assay for Purine Nucleoside Phosphorylase 147

CHUNG S. YANG AND LOUIS P. KICHA. A Direct Fluorometric Assay of Benzo[*a*]-pyrene Hydroxylase 154

GARY L. PETERSON. A Simplified Method for Analysis of Inorganic Phosphate in the Presence of Interfering Substances 164

Z. J. PETRYKA AND C. J. WATSON. A New Rapid Method for Isolation of Naturally Occurring Porphyrins and Their Quantitation after High Performance Liquid Chromatography 173

RAYMOND COUNIS AND SYLVIE MONGONGU, Adenylate Cyclase Assay with [α-^{32}P]ATP as Substrate. A Simple Modification for Lowering Blanks 179

ROGER DAWSON AND KENNETH MOPPER. A Note on the Losses of Monosaccharides, Amino Sugars, and Amino Acids from Extracts during Concentration Procedures 186

RODGER DAWSON AND KENNETH MOPPER. An Automatic Analyzer for the Specific Determination of Amino Sugars 191

STANLEY A. ROBRISH, CHRISTOPHER KEMP, AND WILLIAM H. BOWNEN. The Use of

the *o*-Phthalaldehyde Reaction as a Sensitive Assay for Protein and to Determine Protein in Bacterial Cells and Dental Plaque 196
David W. Speicher and Richard L. McCarl. Isolation and Characterization of the Proteolytic Enzyme Component from Commercially Available Crude Trypsins ... 205
John C. H. Steele, Jr., and Thor B. Nielsen. Evaluation of Cross-Linked Polypeptides in SDS Gel Electrophoresis 218
Michael T. Sung, John J. Bozzola, and James C. Richards. *In Situ* Antigen Localization with Fluorescamine-Conjugated Antibodies: A New Method 225
George A. Mason, James A. Diez, Harry H. Dutton, and George K. Summer. Automated Fluorometric Determination of Free and Total Tryptophan in Plasma 231
P. Picker, J. F. Miller, and D. W. Bolen. A Diaphragm Delivery Device for Flow Microcalorimetry 240
M. Y. Hurwitz and R. D. Edstrom. A Simple, Sensitive Radiomicroassay for 5′-Nucleotidase 246
Joseph M. Corless. Simple and Inexpensive Fabrication of Small-Volume Density Gradients 251
J. F. Chantot and A. J. Saul. A New Method for Measuring Binding of Labeled Ligands to Membrane Receptors 256
D. A. Wilkinson and J. F. Nagle. A Differential Dilatometer 263
Michael S. Rohrbach. [*Glycine*-1-^{14}C]Hippuryl-L-Histidyl-L-Leucine: A Substrate for the Radiochemical Assay of Angiotensin Converting Enzyme 272
Tadashi Maruyama, Tetsuo Shiota, and Carlos L. Krumdieck. The Oxidative Cleavage of Folates. A Critical Study 277

Short Communications

José Xavier Filho and Renato de Azevedo Moreira. Visualization of Proteinase Inhibitors in SDS–Polyacrylamide Gels 296
Tatsuhisa Yamashita and Hiroshi Utoh. A Device for the Retrenchment of Coupling Enzymes for Demonstration of Creatine Kinase on Polyacrylamide Gel 304
Michael L. Bruss and Arthur L. Black. Enzymatic Microdetermination of Glycogen 309
Keiichi Yamamoto, Yoh Okamoto, and Takamitsu Sekine. Fluorescent Tracer Method for Protein SH Groups. II 313
Linda Buckley and Laszlo Beres. Studies on the Stability of Tritium-Labeled Polyuridylic Acid and Polyadenylic Acid 319
Roberta G. Reed and Carol M. MacKay. Sensitive Identification of the Phenylthiohydantoin of Arginine 324
Paul A. Adams and Kevin B. Kurtz. A Direct-Elution Technique for the Recovery of Thin-Layer Samples 328
Stephen J. Luner. A Method for the Radioimmunoassay of Large Numbers of Samples Using Quantitative Autoradiography of Multiple-Well Plates 332
Masahiro Sugiura, Nozomu Ito, and Mie Suzuki. A Simple Method for the Identification of Altered Subunits in Mutant RNA Polymerases of *Escherichia coli* 337
James L. Corbin. A Simple, Automated Apparatus for the Rapid Multiple Flushing of Reaction (Assay) Vessels with Gases 340
Shimon Levit and Madhusudan S. Joshi. A Microassay for the Peptidase Activity of Enzymes Utilizing Ribonuclease S Peptide as a Substrate 343

INGE FROMME AND HELMUT BEILHARZ. Gas Chromatographic Assay of Total and *O*-Acetyl Groups in Bacterial Lipopolysaccharides 347

J. P. KERCKAERT. Highly Simplified Analytical or Preparative Slab Gel Electrophoresis 354

MAKOTO HAYAKARI, YOSHIKAZU KONDO, AND HIROSHI IZUMI. A Rapid and Simple Spectrophotometric Assay of Angiotensin-Converting Enzyme 361

BEN'ICHIRO TONOMURA, HIROSHI NAKATANI, MASATAKE OHNISHI, JUNKO YAMAGUCHI-ITO, AND KEITARO HIROMI. Test Reactions for a Stopped-Flow Apparatus. Reduction of 2,6-Dichlorophenolindophenol and Potassium Ferricyanide by L-Ascorbic Acid 370

ALLAN R. STOWELL, KATHRYN E. CROW, ROBERT M. GREENWAY, AND RICHARD D. BATT. Determination of Acetaldehyde in Blood Using Automated Distillation and Fluorometry 384

PER-OLOF BERGGREN, OVE BERGLUND, AND BO HELLMAN. Determination of Calcium in Microgram Amounts of Dried Biological Material by Flameless Atomic Absorption Spectrophotometry with Special Reference to the Pancreatic Islets 393

J-C. CAVADORE AND B. VALLET. Sulfonated Phenylene-Isothiocyanate-Polyacrylamide as Support for Solid-Phase Sequencing of Proteins 402

GARY K. SMITH, KEITH J. SCHRAY, AND STEPHEN W. SCHAFFER. Use of 5′-UTP–Agarose for Ribonuclease Affinity Chromatography 406

SANGDUK KIM, SAMUEL NOCHUMSON, WALTER CHIN, AND WOON KI PAIK. A Rapid Method for the Purification of *S*-Adenosylmethionine: Protein-Carboxyl *O*-Methyltransferase by Affinity Chromatography 415

JUHA RISTELI, KARL TRYGGVASON, AND KARL I. KIVIRIKKO. A Rapid Assay for Prolyl 3-Hydroxylase Activity 423

A. S. MAK AND B. L. JONES. Application of *S*-Pyridylethylation of Cysteine to the Sequence Analysis of Proteins 432

GEORG HOFFMANN, LUDWIG WEISS, AND OTTO H. WIELAND. Measurement of ATP Citrate-Lyase and Acetyl-CoA Synthetase Activity Using Arylamine Acetyltransferase 441

O. S. PRIVETT AND W. L. ERDAHL. An Improved Flame Ionization Detector for High Performance Liquid Chromatography 449

F. ROBERT TABITA, PIA CARUSO, AND WILLIAM WHITMAN. Facile Assay of Enzymes Unique to the Calvin Cycle in Intact Cells, with Special Reference to Ribulose 1,5-Bisphosphate Carboxylase 462

E. JAMES SQUIRES AND JOHN T. BROSNAN. Determination of the Specific Radioactivity of ^{14}C-Labeled Glutamic Acid and Glutamine 473

CHIE FURIHATA, TOMOKO SENMA, DAIZO SAITO, TAIJIRO MATSUSHIMA, AND TAKASHI SUGIMURA. A New Fluorescent Microassay Method for Pepsin Using Succinyl-Albumin 479

I. FRED KOLHOUSE AND ROBERT H. ALLEN. Isolation of Cobalamin and Cobalamin Analogs by Reverse Affinity Chromatography 486

STEPHANIE WEBBER, THOMAS L. DEITS, WILLIAM R. SNYDER, AND JOHN M. WHITELEY. The Purification of Rat and Sheep Liver Dihydropteridine Reductases by Affinity Chromatography on Methotrexate–Sepharose 491

BARBARA VASQUEZ AND ALLAN L. BIEBER. Direct Visualization of IMP–GMP: Pyrophosphate Phosphoribosyltransferase in Polyacrylamide Gels 504

P. MCDERMOTT WEISS, V. G. DELVECCHIO, AND JEAN B. BURNETT. An Apparatus for Immunoelectrofocusing. A Study of Squid Tyrosinase 512

Kaj André Holm. Automated Colorimetric Determination of Cellulase Activity in Fermentation Samples Using a Ferricyanide–Molybdoarsenic Acid Reagent 522
Helena Wachslicht and Andreas Chrambach. A Simple Device for Protein Concentration by Steady-State Stacking 533
J. D. Ford and J. R. Baker. Procedures for the Automated Analyses of Proteoglycans and Glycosaminoglycans 539
David R. Zusman. A Rapid Batch Assay for Cyclic AMP Phosphodiesterase 551
Dennis G. Drescher and Kang S. Lee. Extraction of Fixed, Stained Protein Bands from Gels for Micro Amino Acid Analysis Using *o*-Phthaldialdehyde 559

Short Communications

Thomas J. Mende and Philip L. Whitney. Microdetermination of Inorganic Sulfate Using Thin-Layer Plates 570
D. J. Leblanc and A. J. S. Ball. A Fast One-Step Method for the Silylation of Sugars and Sugar Phosphates 574
Thomas B. Breithaupt, Irene E. Nystrom, Donald H. Hodges, Jr., and Joseph A. Babitch. Composition of an Isoelectric Focusing Gel Yielding a Broad pH Gradient 579
M. J. Frenkel and R. J. Blagrove. Cellulose Acetate Impregnated with Polyacrylamide: A Novel Medium for Electrophoresis 583
Stanislav Tuček, Miloš Havránek, and Ida Ge. Synthesis of [*acetyl*-^{14}C[Carnitine and the Use of Tetraphenylboron for Differential Extraction of [*acetyl*-^{14}C]Choline and [*acetyl*-^{14}C]Carnitine 589
B. Eisele and G. Heinzel. An Automatic Enzymatic Determination of Glycogen in a Continuous-Flow System without Interference of Free Glucose 594
Leif Holmquist and Kerstin Carlson. Specific Elimination of Albumin in Serum Lipoprotein Preparations 598
Mamoru Terada, Yoshinori Watanabe, Masaru Kunitomo, and Eiichi Hayashi. Differential Rapid Analysis of Ascorbic Acid and Ascorbic Acid 2-Sulfate by Dinitrophenylhydrazine Method 604
C. John Garratt. A Simple Method for Measuring the Tricarboxylic Acid Cycle and Pentose Phosphate Pathway in Adipose Tissue 609
Peter H. Yu. A Sensitive Enzymatic Procedure for the Quantitative Determination of *S*-Adenosylhomocysteine in Tissues 615
George E. Tarr, James F. Beecher, Michael Bell, and David J. McKean. Polyquarternary Amines Prevent Peptide Loss from Sequenators 622
Joseph A. Walder and Irving M. Klotz. Design and Operation of an Adapter for the Measurement of Platelet Aggregation with a Spectrophotometer 628
Nedyalka G. Markova, Ivan G. Ivanov, and George G. Markov. Influence of Ag^{+} and Hg^{2+} Cations on Hydroxyapatite Chromatography of DNA. Purification of DNA Preparations from Silver 633
Michael A. Beaven, Gilbert Wilcox, and Gerben K. Terpstra. A Microprocedure for the Measurement of $^{14}CO_2$ Release from [^{14}C]Carboxyl-Labeled Amino Acids 638
Fred S. Esch and William S. Allison. A Procedure for the Synthesis of *p*-Fluorosulfonyl[^{14}C]benzoyl-5′-Adenosine with [^{14}C] in the Benzoyl Moiety ... 642

Author Index for Volume 84 646

The Subject Index for Volume 84 will appear in the December 1978 issue as part of a cumulative index for the year 1978.

INFORMATION FOR AUTHORS

Analytical Biochemistry will publish articles of broad interest on qualitative and quantitative techniques based on chemical, physical, and biological principles; methods of preparation, purification, characterization, isolation, and separation of biological substances and related materials; and instrumentation.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permittion to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted to **Dr. Alvin Nason, Editor, McCollum-Pratt Institute, The Johns Hopkins University, Baltimore, Maryland 21218.**

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. At least two copies should be submitted, each copy to include all figures and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title not exceeding 35 letters and spaces), an abstract (50–150 words), and address to which proof should be mailed. Please number all pages of manuscript.

Authors are encouraged to use descriptive subheadings in this order: Abstract, Introductory statement (no heading), Methods, Results, Discussion, Acknowledgments, and References.

Units of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm).

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the *Archives of Biochemistry and Biophysics* Information for Authors, appearing in the January issues of that journal.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at bottom of page containing table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Chattoraj, D. K., and Bull, H. B. (1971) *Arch. Biochem. Biophys.* **142**, 363–370.
2. Gottschalk, A. (1960) *in* The Enzymes (Boyer, R. D., Lardy, H. A., and Myrback, K., eds.), 2nd ed., Vol. 2, pp. 461–467, Academic Press, New York.
3. Meister, A. (1957) The Biochemistry of Amino Acids, p. 298, Academic Press, New York.

Proofs. Galley proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge.
